“Doors steal the show with their design”

Waterworld® carwash equipped with Efaflex high-speed roll-up doors

Functionality, security and reliability are properties, which are extremely important to companies when installing industrial doors. However, because modern industrial buildings must now normally be attractive as well as simply functional, the demand for high-quality design of doors is increasing. NSI Tankstellenservice in Aschaffenburg placed major importance on the design of the construction when building its Waterworld® carwash, choosing high-speed roll-up doors from Efaflex for this reason.

“I am a fan of quality,” says Necip Yilmaz, managing partner of NSI Tankstellenservice. “For this reason, I bestow the greatest of care on the planning of this building and the selection of suppliers.”

Efaflex, the Bruckberg-based specialists of high-speed roll-up industrial doors have provided 17 doors which are protected from noise, burglaries and ensure that heat remains in the building.

“The doors not only steal the show due to their high functionality, their design is also brilliant. They are a perfect match to the philosophy of our establishment,” explains Necip Yilmaz. The colour of the doors blends in outstandingly with the russet of the facade. The Managing Director explains how he spent three weeks developing the external metallic paint of the building himself.

“The design and colour of the doors complement the facade perfectly.”

Necip Yilmaz explains how he researched extensively about various industrial high-speed roll-up doors and found the prices for Efaflex doors to be absolutely justified. “You always have to view the expenses in relation to the overall

building. The project costs €6 million, so you should not scrimp on critical points like the doors. Cheap products bring nothing to the table because something is always constantly breaking.” The Managing Director cannot afford for the doors to break down, as this would result in the carwash being closed. With 850 vehicles a day, this would quickly lead to congestion and consequently, dissatisfaction among his clients, who are more than important to Necip Yilmaz. “Quite simply, when you build such a building, everything must fit,” says the perfectionist. “The best service and care of customers is an essential part of this.” 58,000 vehicles have been washed and cleaned in Waterworld® since October 2009 and the Managing Director explains how most of these are large cars from expensive brands. Slowly, small car drivers are also turning to the carwash because they can see that our outstanding service does not cost any more than a normal carwash.

The carwash in Aschaffenburg is not NSI Tankstellenservice’s core business. For more than 15 years, the company has been modernising carwashes and petrol stations as a service provider of mineral oil companies and is among the most successful in this market segment. The tiling of wash walls and floor coatings for various fields of use are just one of the specialist areas of the NSI Tankstellenservice. The company has developed and optimised the materials it uses for special fields of use itself. The Waterworld® carwash is currently the only one of its kind in Germany and further projects of this type are already being considered. When questioned about the planned furnishings, Necip Yilmaz answers, “Of course, I will rely on those suppliers who have already proven themselves.”
