

Healthier employees without draughts in the warehouse

Josef Urzinger GmbH in Landshut separates its distribution warehouse from its shipping department with a high-speed door from EFAFLEX.

USER REPORT

Every day, around 80 tonnes of laundry roll through the EFA-SRT®-L ECO. from EFAFLEX in containers. The orange door, matching the corporate colour of Josef Urzinger GmbH in Landshut, opens and closes 120 times an hour. It prevents draughts and ensures that employees stay healthy.

'The old door between the distribution warehouse and the dispatch department was usually open in summer, but in winter it often failed to work,' reports Robin Bauer, production manager and head of the shipping department at Josef Urzinger GmbH. For the employees of the industrial laundry, the cold draughts in the distribution warehouse, which flowed in from the dispatch department, were often the cause of colds. 'A solution had to be found for the well-being of the employees,' explains Robin Bauer. 'We really liked the design of the EFAFLEX doors.' In order to avoid unwanted draughts in the future, the new door had to open and close quickly, but also had to be very robust due to the high

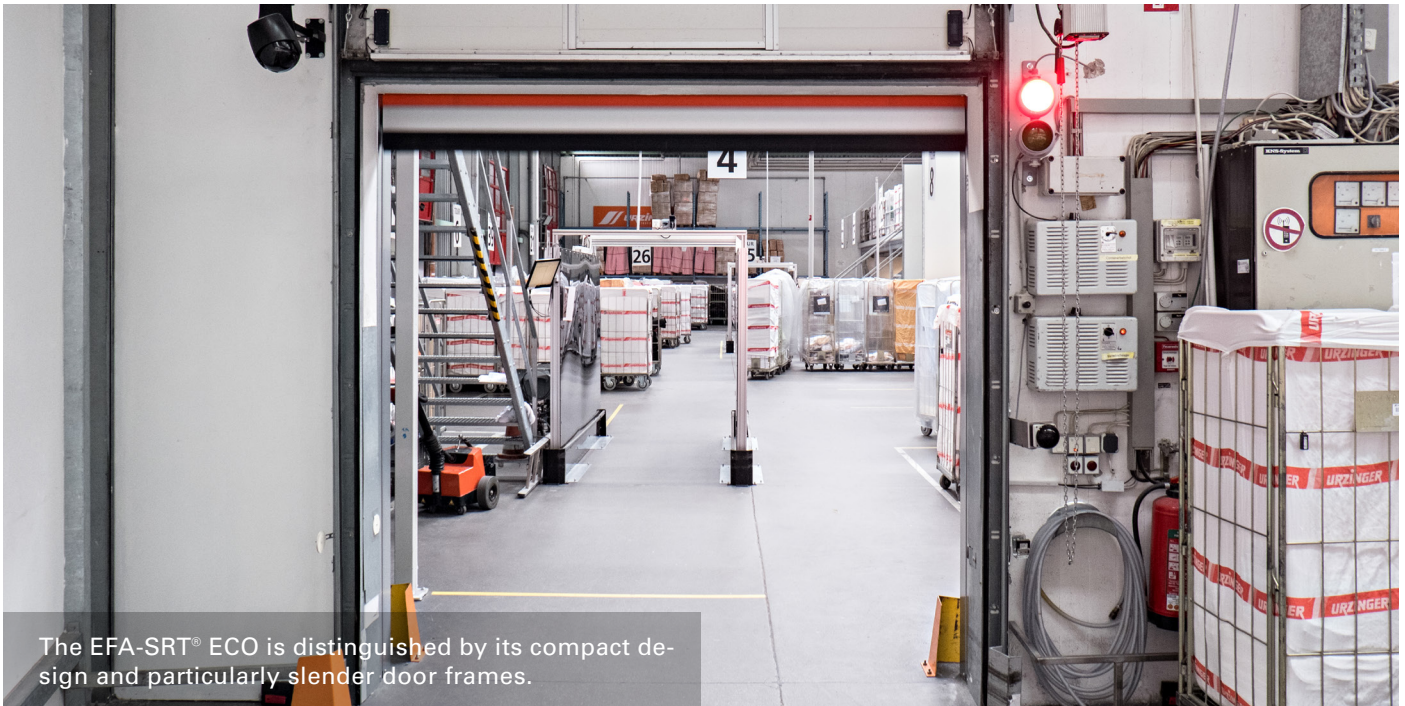

number of work cycles. Around 1,100 laundry containers roll from the delivery warehouse to the dispatch department every day. Nevertheless, it now stays warm and the employees in the delivery warehouse are very happy with it. 'I have only good things to say about EFAFLEX,' says the production manager. 'Everything worked very well, from the consultation with the sales representative to the planning and installation. The price is right, and our request for a traffic light system at the door to prevent accidents was implemented immediately.' In addition, EFAFLEX is right on the doorstep, so customer service for maintenance is not far away.

The EFA-SRT® ECO installed between the dispatch warehouse and the shipping area effectively prevents cold draughts.

I can only report positive experiences with EFAFLEX. From the coordination with the field service team, through the planning phase, all the way to the installation, everything worked exceptionally well.

Robin Bauer

The EFA-SRT® ECO is distinguished by its compact design and particularly slender door frames.

Efficient endurance runner: Product information EFA-SRT®-L ECO

The EFA-SRT® ECO high-speed roller door is an extremely economical door system offering outstanding value for money. Thanks to its space-saving design, such as the very narrow side frames, no special structural preparations are necessary. This makes the EFA-SRT® ECO more versatile than any other roller door. The design with flexible curtains ensures extremely high opening and closing speeds, even at sizes of

6,000 x 7,000 millimetres. The high-speed roller shutters of the R series are also ideally suited for heavy-duty industrial use. Safety buttons on the outer edge of the curtain keep it securely in the guide, even in wind, draughts and air pressure differences. The door opens at up to two metres per second and closes at up to one metre per second, effortlessly completing 150,000 load cycles per year.

Clean laundry for 2,000 customers

480 employees work at Josef Urzinger GmbH in the laundry, laundry warehouse and branch offices of the company. Employees of the company personally take care of laundry logistics in the large hospitals in the region. The laundry service provider offers procurement, laundry rental and related services within a 200-kilometre radius

of Landshut. The laundry is delivered to 2,000 different customers in the catering, healthcare, industrial and craft sectors on 45 different routes. This includes table and bed linen, towels and workwear. The family business was founded 127 years ago and is now run by three sisters in the fourth generation.
